WELCOME TO SPEER®

Speer's Gold Dot® has emerged as one of the most trusted personal defense loads available. Year after year, it remains the top choice when the stakes are high. This reputation has been established with both uniformed officers and private citizens carrying for protection. However, we don't just offer specialized high performance ammunition, we also boast a full line of affordable options for training purposes and high-volume shooters. Speer® is dedicated to providing you with an ideal option for every situation. This means that no matter what you are looking for, Speer has the answer.

In 1996, CCI/SPEER became the first U.S. ammunition manufacturer to achieve ISO 9001 certification for quality. All engineering, manufacturing, marketing, quality assurance and service functions continue to routinely undergo ISO audits to maintain this high level of quality accreditation. This distinction means all CCI/SPEER manufacturing processes and procedures continue to meet ISO standards of QUALITY.

BONDED GOLD DOT® CONSTRUCTION

Expect Nothing Less than the Best.

We take hours to make a Gold Dot® bullet for the split-second you might need it. Our exclusive manufacturing process gives us the flexibility to match bullet design to cartridge performance. Our bonding happens at the beginning of the bullet making pro-

cess, exactly where it should. We form the hollow point cavity in two stages to give our engineers incredible control in the design process. Each bullet caliber and weight is tuned for optimum expansion and penetration.

1 The Speer Gold Dot bullet begins with an alloyed lead core.

2 Uni-Cor technology bonds an incredibly uniform jacket to the core—one molecule at a time.

3 First stage of patented* two-stage hollow point process creates memory lines that expansion can follow.

4 Second forming stage finishes the cavity to match bullet weight and velocity, producing a smooth leading edge for reliable feeding, and a uniform heel for superb accuracy.

Bullet and case are assembled using top-quality nickel-plated brass cases, clean-burning, low-flash propellants, and famous and reliable CCI® primers.

TESTED. PROVEN. TRUSTED. GOLD DOT®

Performance You Can Count On, Every Time.

We know you can count on Gold Dot® because we hold it to the highest of standards. We make sure that it will excel in stringent handgun ammunition tests developed by the Federal Bureau of Investigation for service-class handgun cartridges. Look below for an example of Gold Dot results. The load is a 38 Special +P Short Barrel Gold Dot fired from a 2-inch revolver—a real challenge for other bullets. The numbers tell you that this load, like all Gold Dot offerings, is an excellent performer.

Outstanding Gold Dot performance. Here, Gold Dot shows optimum penetration and expansion through bare gelatin.

GOLD DOT® AMMUNITION

GOLD DOT® PERSONAL PROTECTION Performance You Can Trust.

Trust isn't something that's granted, it's earned. Gold Dot® has earned the respect of police officers worldwide. You too can count on Gold Dot Personal Protection's superb accuracy and reliability. Whether you need the best for concealed carry or home protection,

Gold Dot delivers. Last year's introduction of the .327 Federal Magnum drew rave reviews, and the 115-gr Gold Dot offering was a big part of that. Built on the smaller 32 caliber platform, this cartridge boasts ballistics that rival the 357 Mag. This caliber and bullet combination promise to be a favorite for both personal protection and law enforcement for years to come.

GOLD DOT® SHORT BARREL® PERSONAL PROTECTION Superior, Specialized Ammunition.

Not long ago, packing a snub-nosed revolver or compact semi-auto meant giving up performance. It also limited ammunition selection. Speer's successful introduction of Short Barrel® ammunition solved a lot of these problems. This new line was designed from the ground up to work in 2-inch barrels, and has been widely successful in both law enforcement and consumer markets.

Our Short Barrel loads provide less "kick" to keep you on target when wielding snappy 357 and 44 magnum revolvers. And if semi-auto is your choice, our offerings are ideal for expansion in barrels as short as three inches. In addition to finely-honed performance in compact firearms, Short Barrel gives you all the other great Gold Dot® attributes. You get accuracy, bonded-core bullets and the attention to detail that has made Gold Dot so successful.

GOLD DOT® HANDGUN HUNTING

 Designed for the Hunter

Gold Dot® hunting bullets are bonded just like our Personal Protection offerings, but get heavier jackets for tough game. We choose weights that are optimum for larger animals so there is sufficient penetration. These bullets retain over 90 percent of their initial weight after expansion and are accurate too. So you can be confident that your ammunition will do the job if you do your part.

LAWMAN® AMMUNITION

LAWMAN® TRAINING

Quality Performance.

Today, the evolution of the Speer ammunition lines has let us differentiate the ammunition by use. Lawman encompasses all our high quality brass-case, training, practice and general purpose ammunition. Every Lawman cartridge is loaded with a Speer TMJ® bullet that has a bonded jacket encapsulating the entire lead core. When you're target shooting, training or out for an afternoon of plinking, you don't need a hollow-point. These are the times Lawman is right at home.

Lawman is attractively priced, and the cases are reloadable. We load clean-burning propellants and reliable CCI primers to complete the package. Many Lawman loads duplicate the velocities and bullet weights we load in Gold Dot® so your practice is realistic. Lawman is made in calibers from 32 Auto through 45 Auto. Shooters have trusted Lawman for over a third of a century. Today, it's earning the trust of new generations of shooters.

LAWMAN® CLEAN-FIRE® TRAINING

The Indoor Training Solution.

Lawman® Clean-Fire® differs from regular Lawman in the primer that it uses. The ignition comes from our patented Clean-Fire primer that contains no lead, barium or antimony. And the bullets we load are also Speer's trustworthy TMJ. The lead core is completely and seamlessly encased in jacket material so powder gases can't burn lead off the bullet base. These two differences make Lawman Clean-Fire an ideal indoor option by leaving range air, and your firearm, cleaner.

Caliber	Part #	Bullet Wt. (grs)	Muzzle Velocity (ft/sec)
Speer® Lawman® Clean-Fire® Training			
9mm Luger	53824	124	1090
	53826	147	985

*Trajectory: bullet path relative to line-of-sight when sighted for 25 yards (sight height 0.9 inches). Test barrels are used to determine ballistic figures. Individual firearms may vary. These figures are approximate and are shown for reference. V = Vented test barrel simulating revolver performance. If using a scoped handgun use ballistic software package RCBS Load to compute bullet drop.
